

New Option

Description of the FDT Option

This option speeds up data read-out from the MAS MICRO-II / MAS MATCH-II to the terminal by a factor of up to 5.

The recorder is connected to the PC by a special Universal Serial Bus (USB) / serial converter to utilise higher data rates which are not supported by a normal Windows COM port.

Also older versions of the MATCH-II and MICRO-II recorder products can be subsequently equipped with the FDT option .

Hardware

- Special external RS232/USB converter
- (The correct function of the fast data transfer is only guaranteed if a converter that was tested by SWIFT for this option is used).

Software

- Recorder software (Firmware)
