

## INLINE DGADP TTL / HTL *ELINL2 / ELINL3*

The Inline DGADP TTL / HTL is a mobile version of our incremental encoder adapter. Its compact design makes it particularly suitable for use in vehicles or on motorcycles. A TTL option and a HTL option are available. Pulses can be measured in forward and reverse direction. The pulse following the reference mark (once per revolution) is always available. The Inline Encoder Adapter (DGADP) is also protected against reverse polarity.
